

Nissan Production Proto Z

The **400Z** Unveil

After revealing their newest prototype for the next car in Nissan's famed line of Z's back in September, Nissan has finally unveiled their up-to-spec finalized production vehicle, now officially titled the 400Z.

Nissan has revealed that this track-oriented car will produce the most power of any Z in the 50 years of its product line. Equipped with a 3.0 liter twin turbocharged V-6, "a gunmetal grey color choice, a T-bar roof, and of course a manual transmission", it is any car enthusiasts' dream.

With a modern front end with a massive opening for maximum air intake, and a rear end with the retro tail lights seen last on the 300ZX, the 400Z is the amalgamation of the most loved aspects of different Z's. So far, the response has been overly positive.

Nissan is getting back to the basics of their Z business plan, which is to make competitive, fast, and beautiful sports cars at an affordable price the average middle-class consumer can afford. The new 400Z has an official starting price of \$35,200, with the nismo nissan performance division package starting at exactly \$40,000. The first of these cars will roll off of the production line in late 2021, and the first car will be delivered in early 2020. Preorder the car on the NissanUSA website under the vehicle section. We look forward to your business.
